

WERX Series Seminar AFR's Science Technology Web Tool Tech Connect

2021

WERX hosted an Innovation Education workshop with Eli Alet Escamilla, the department head of the Air Force AF Science and Technology & Tech Connect lead. As a part of the WERX seminar series, Escamilla explained the Front Door Service's history, capabilities, and applications to an audience of military and civilian attendees.

The WERX seminar series is a monthly seminar program that highlights innovation around the Air Force in a conversation with invited leaders. WERX Director's Escamilla expanded on her role with the new interface tool that strengthens partnerships and leverages innovation networks as all a part of the same network ecosystem, pulling on the strengths of small business partnerships and innovation relationships. She found multiple ways to access opportunities, Escamilla explained.

We are trying to tie all of these ecosystems together and gather ideas to create easier avenues for transformative innovations.

The seminar was recorded and posted on the WERX YouTube channel as a part of the WERX series.
